

# Combing for all Reasons

*Like hand washing, combing is a basic hygiene measure. Combing provides a reliable approach for screening, early detection, accurate identification, treatment and prevention of pediculosis*

## Cost-Effective

Provides a cost-effective alternative for those who need or prefer to avoid pesticides

## Personal Hygiene

Similar to hand washing, teaches young children personal care habits that benefit themselves and the community

## Empowers Parents

Enables parents to independently screen and treat themselves

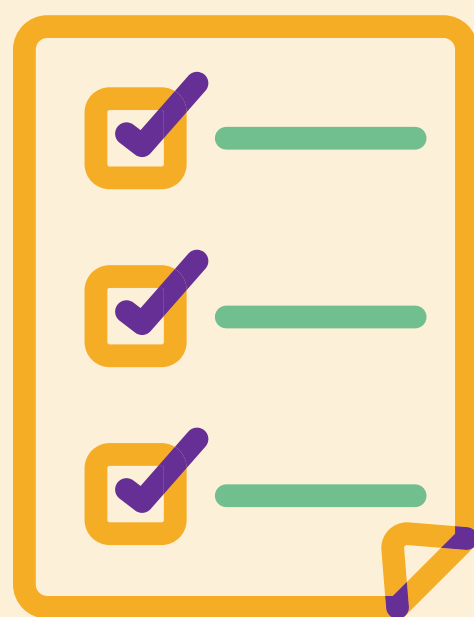

## Safe Replacement

Is a safe replacement for chemical treatments that can be harmful both to the person applying the treatment and the person being treated, especially for those for whom chemical treatments are contraindicated

## Accurate Collection & Accounting

Allows for more accurate collection and accounting of louse and egg specimens for scientific research

## Keep Kids in School

Enables parents to send their children to school free of lice and nits – helping to keep all children in the classroom

## Ends an Infestation

Ends an infestation – no matter what other products are used. The FDA has acknowledged that combing on its own is a valid treatment for head lice.
