

The LiceMeister® Comb

The Gold Standard in Combing Tools

To meet the need for a safe and effective lice and nit removal tool, the NPA developed the LiceMeister® comb; a 510K FDA designated medical device for routine screening, early detection and removal of lice and nits, constituting both an effective tool for prevention and a non-chemical treatment if an infestation occurs. The NPA's LiceMeister® comb has set a new standard in combing tools! [See a video](#) on how to use the comb and [find out how to order!](#)

- Works on dry, wet or damp hair
- Enables parents to screen regularly, as the NPA recommends, to detect head lice and their nits as early as possible
- No batteries... it's people-powered
- Reusable; constructed for long-term use
- Boilable and sealed plastic handle
- Inch-and-a-half long, precision spaced and high-polished stainless steel teeth
- Each comb meets exacting standards of quality control
- Teeth soldered together before being molded into the sturdy plastic handle
- Passes through the hair without pulling or tearing, collecting lice and nits as it goes
- No jagged edges on teeth or handle to "catch" while combing, kids don't cry or yell "ouch"
- Provides a mechanical alternative for the chemically sensitive
- Available with a bi-lingual instructional video
- Proceeds help support the NPA's programs of education, prevention and research
- The NPA actively promotes the comb on its website

The LiceMeister® comb provides the medically safe and cost-effective alternative for those who prefer not to use pesticides as well as those already identified as vulnerable to chemical agents of any kind.
